

Tadweerah — Phase 1 Executive Overview

Note: Payment is off-platform (bank transfer or cheque). The platform records the confirmation only.

A. Onboarding & Company Approval

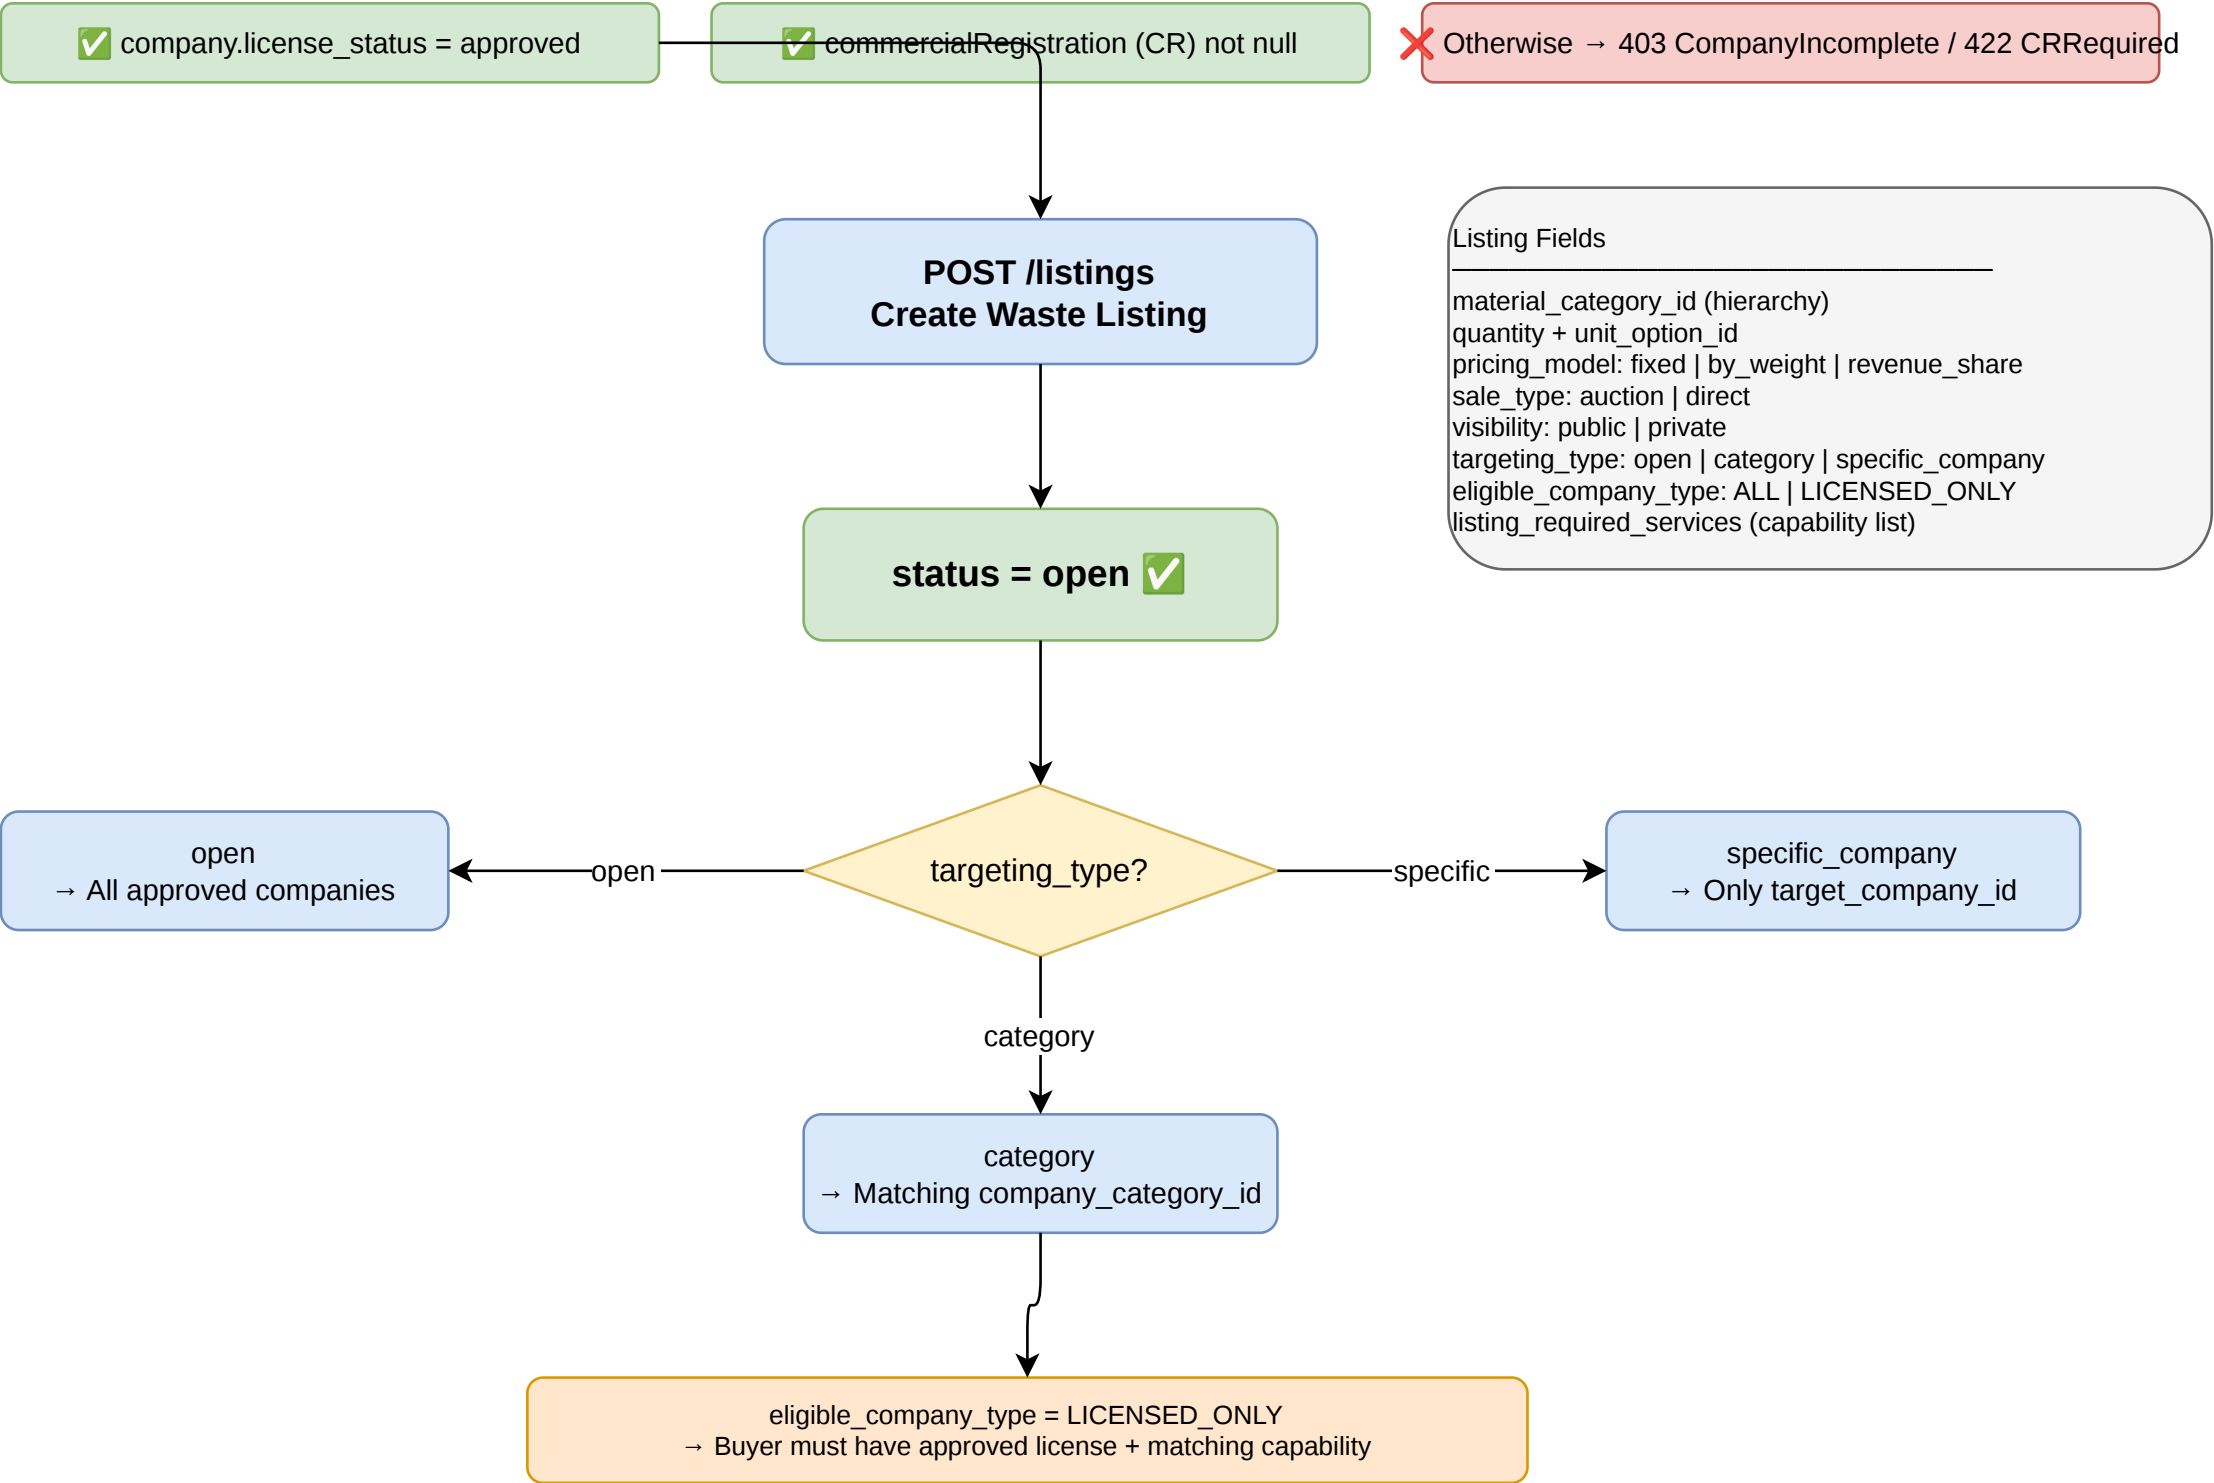

User registers via Clerk, creates a company profile, and waits for manual platform approval. Access to all operational features is gated on license_status = approved.

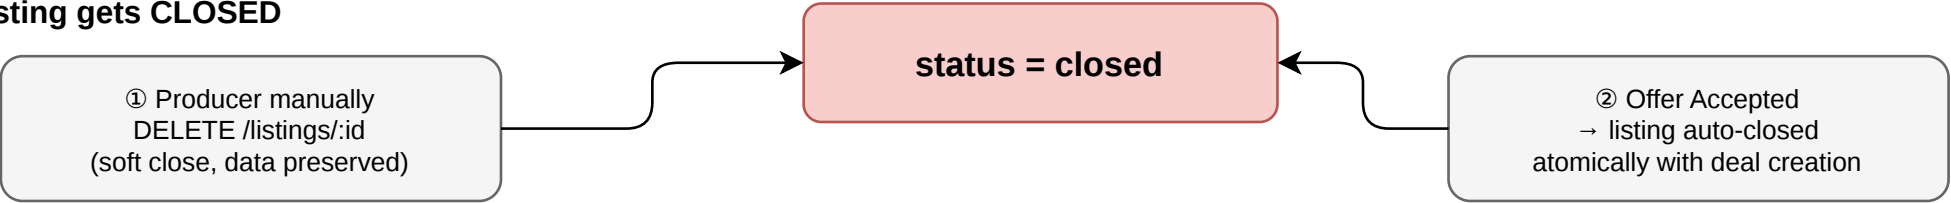

B. Listings Flow

Approved producers create waste listings. Listings have targeting, pricing model, and eligibility rules that control who may submit an offer.

Pre-Conditions (Guards) — checked on POST /listings

How a listing gets CLOSED

C. Offers & Bidding Flow

Buyers submit price offers on open listings. A rules engine checks eligibility. The producer selects one offer; the rest are auto-rejected and a deal is created atomically.

Rules Engine — checkPureEligibility (POST /listings/:id/offers)

✔ listing.status = open

✔ buyer ≠ producer (own listing)

✔ buyer.license_status = approved

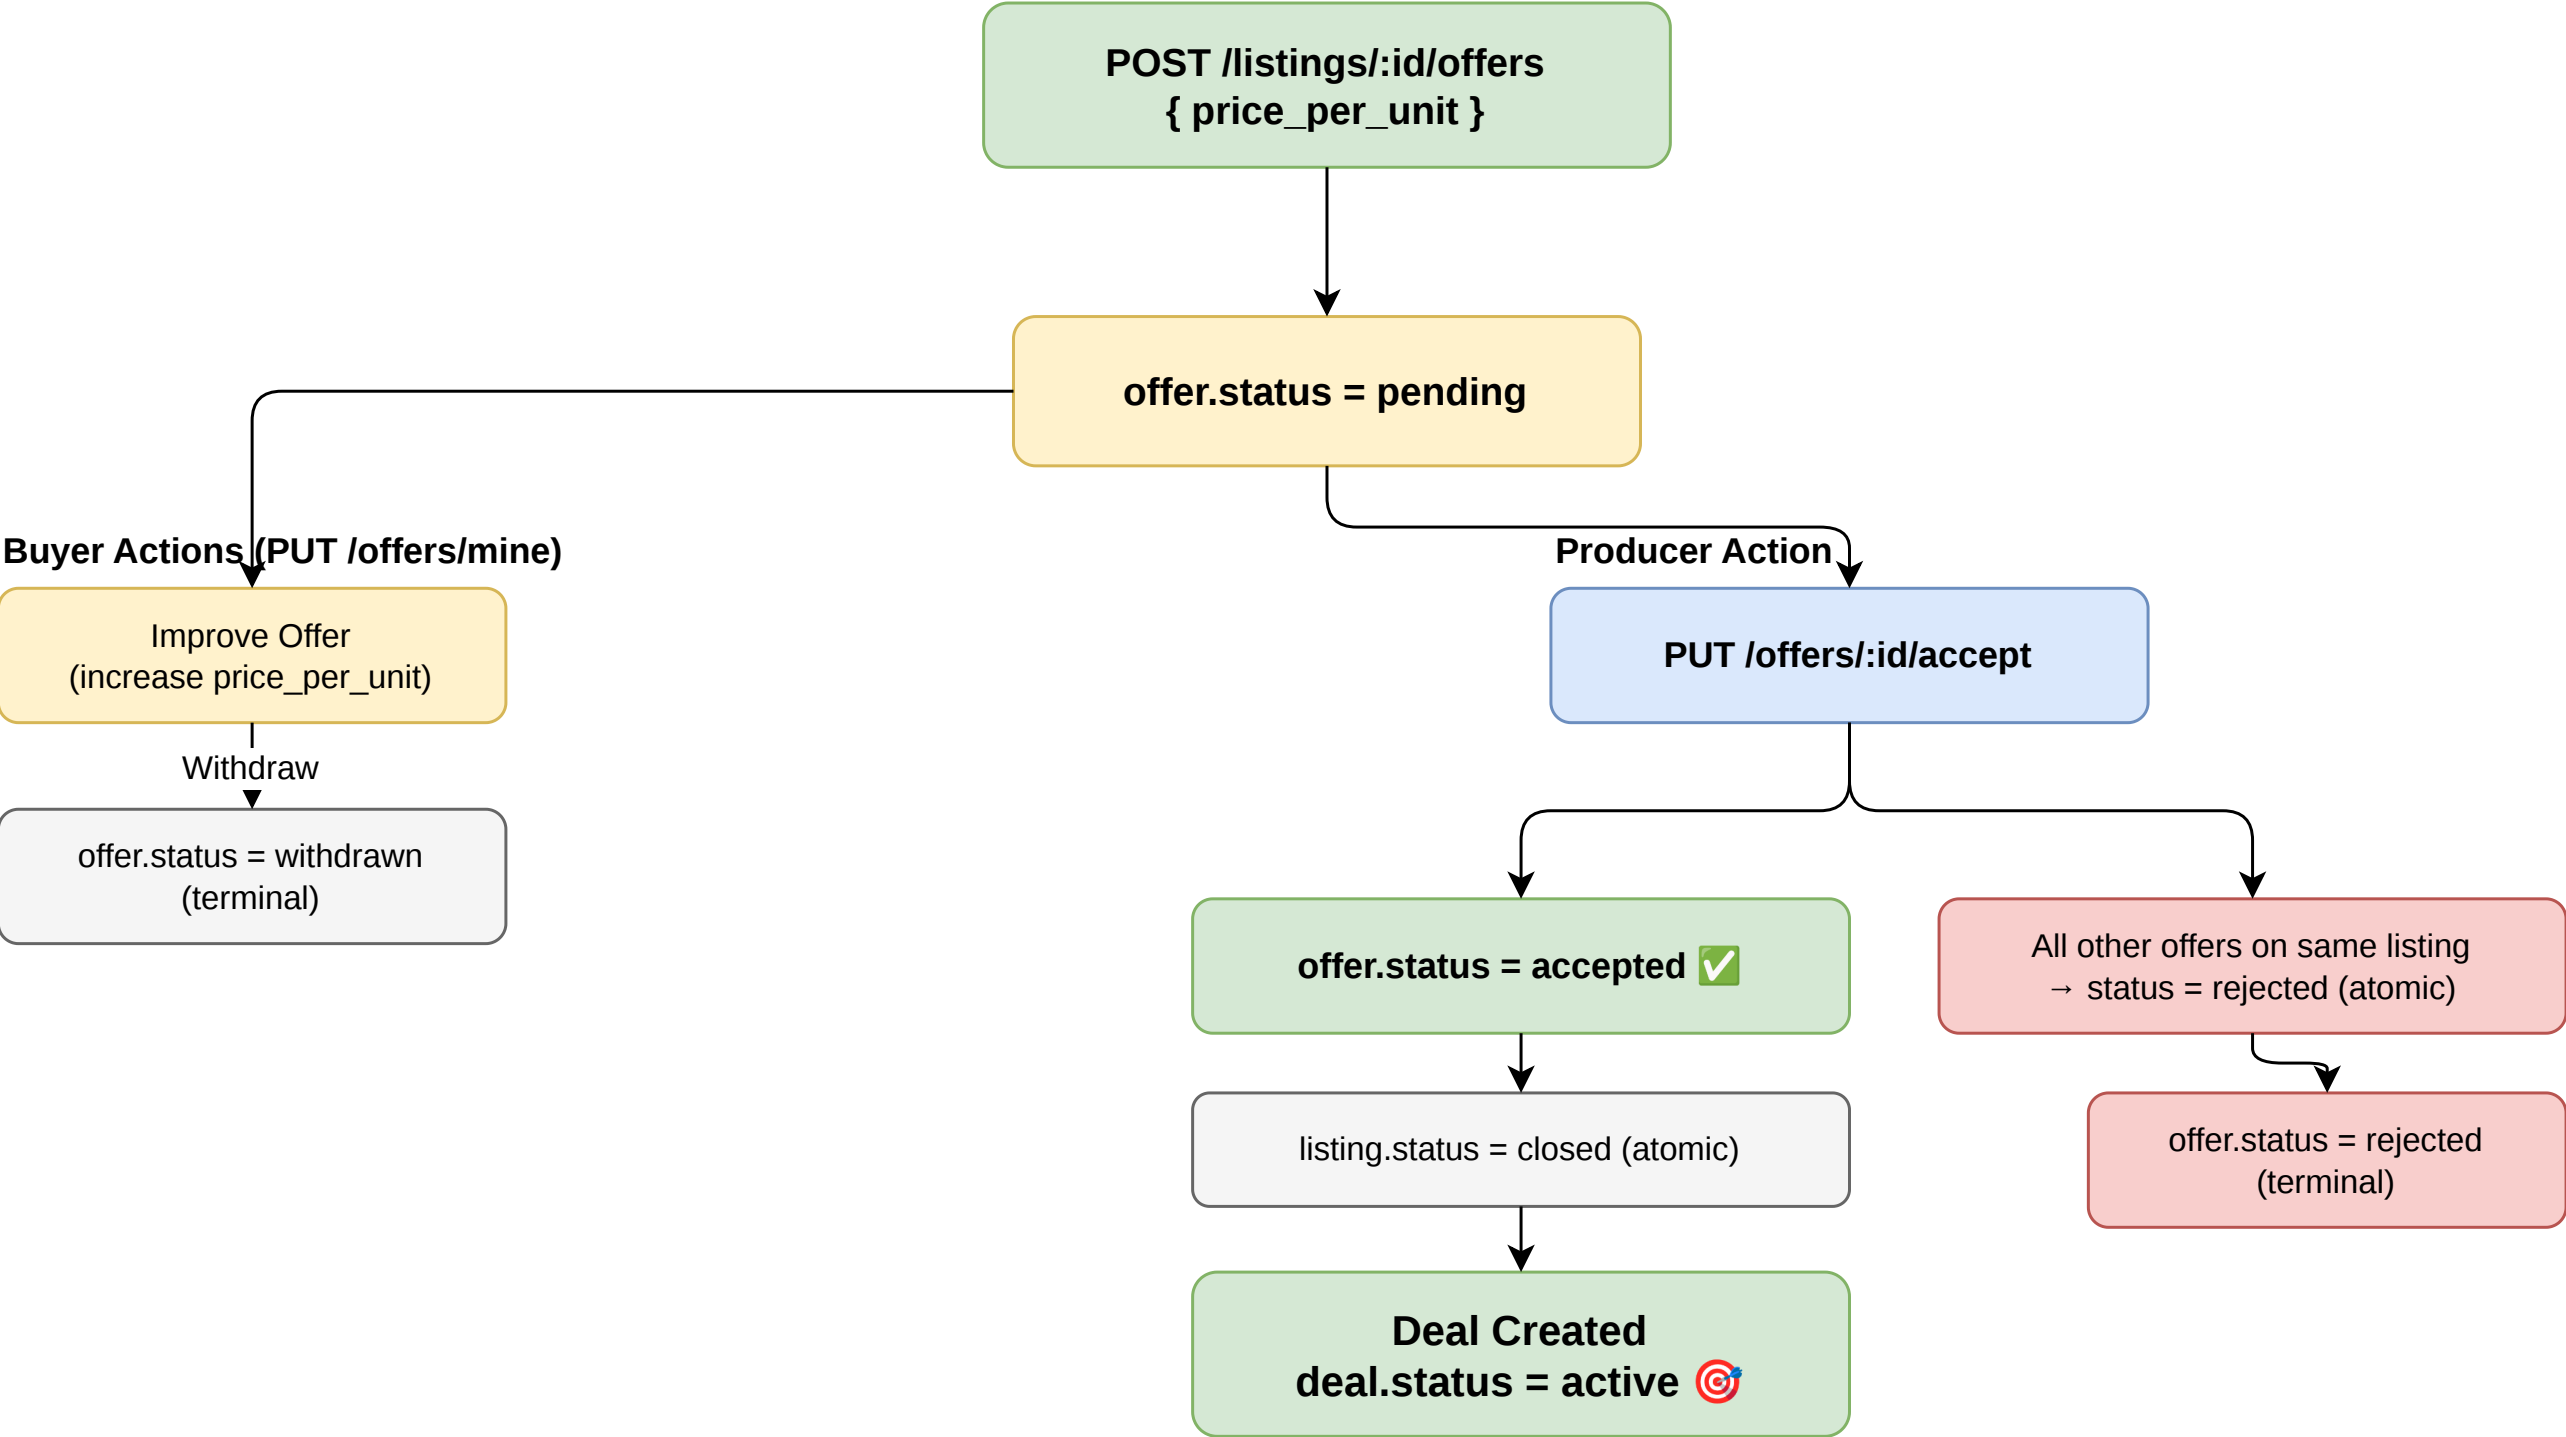

✔ buyer has CR number

✔ No existing offer from buyer on same listing (unique constraint)

✔ Targeting match: open | category | specific_company

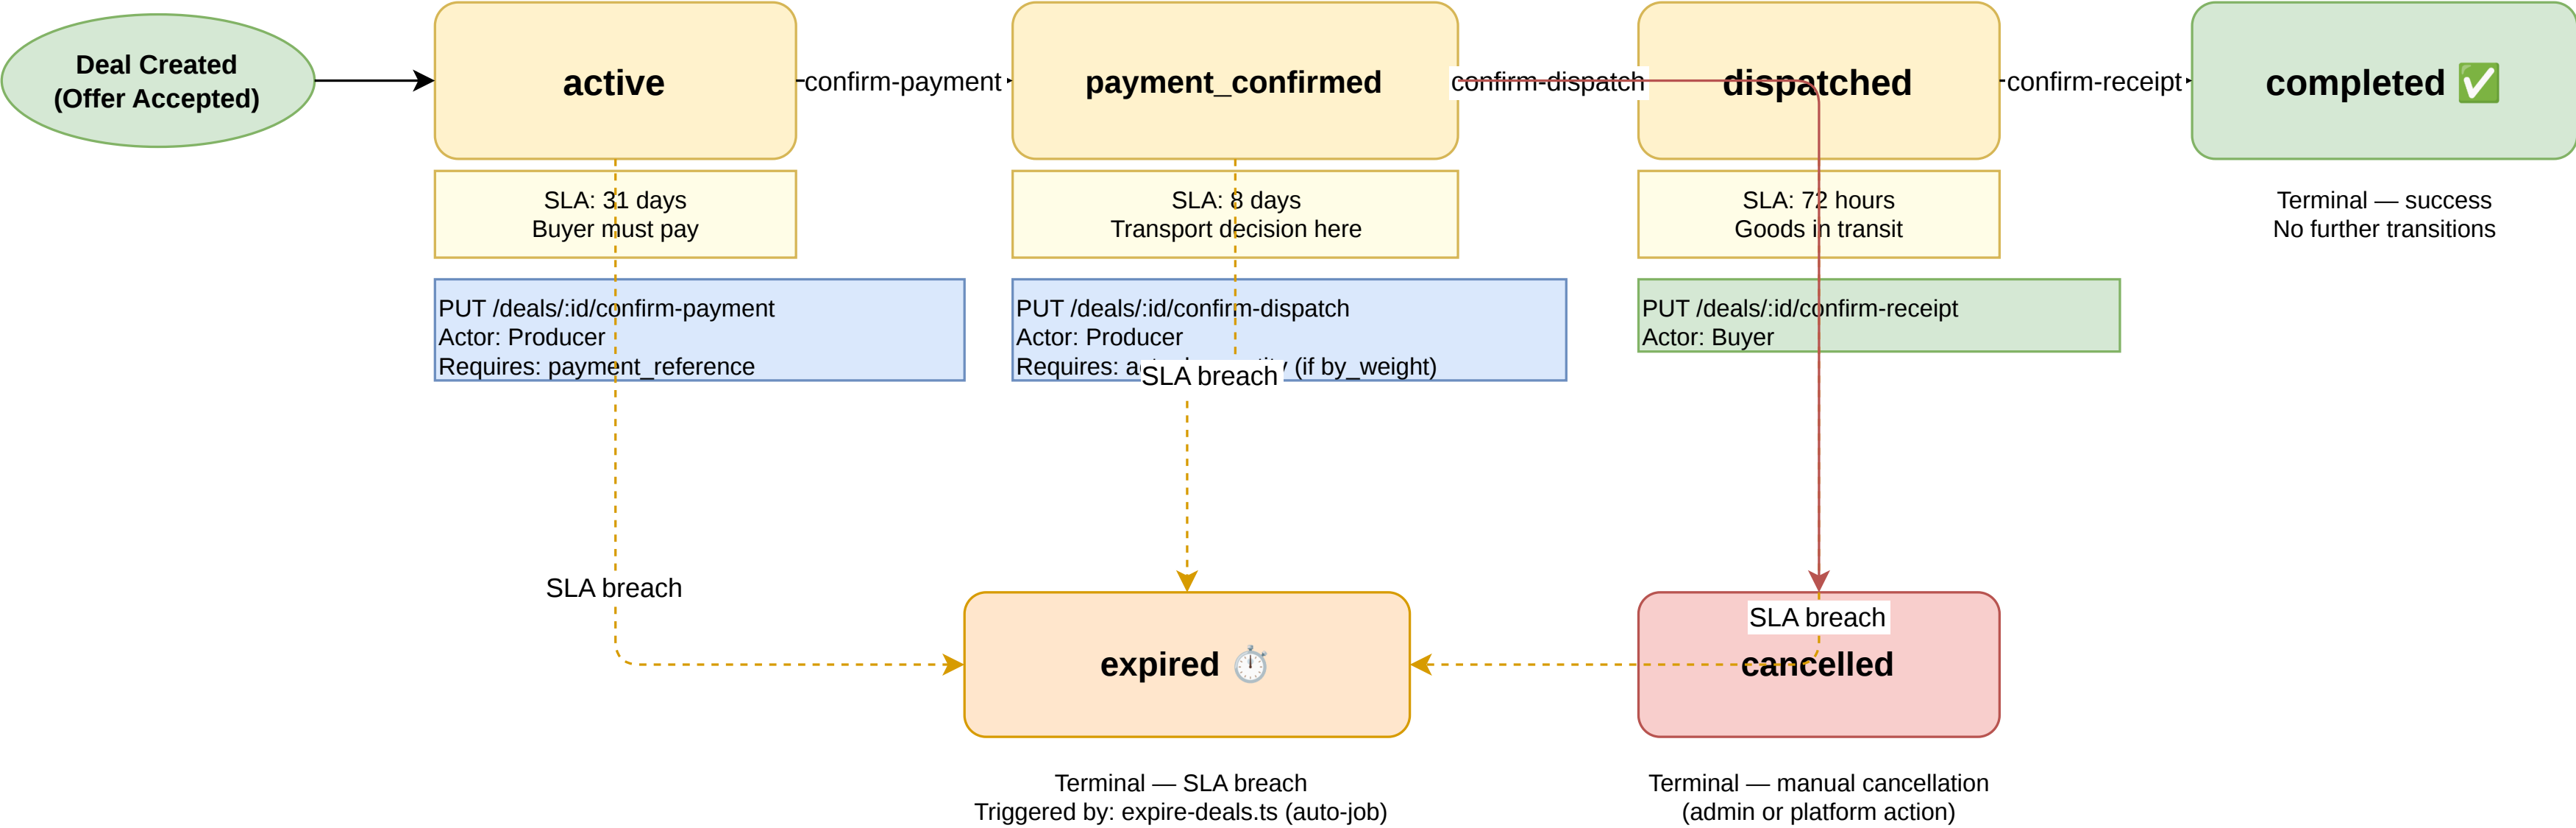

✔ If LICENSED_ONLY: buyer capability + license match

Fail → 403 OwnListing | CompanyIncomplete | LicenseRequired | TargetingRestricted
409 OfferExists 422 CommercialRegistrationRequired

D. Deal Lifecycle State Machine

A deal is created atomically when an offer is accepted. It progresses through payment, dispatch, and receipt. Automated SLA expiry jobs monitor each stage.

SLA Expiry Rules (expire-deals.ts automated job)

- active → expired (31 days from creation)
- payment_confirmed → expired (8 days)
- dispatched → expired (72 hours)

⚠ by_weight pricing: actual_quantity (weighbridge) is required at confirm-dispatch
Final price = actual_quantity × price_per_unit (instead of estimated qty)

✓ Deal Extension: extension_count tracked. extended_until overrides default SLA.

E. Transport Request Flow

After payment confirmation, either party can open a transport request. Two modes: platform-managed (Tadweerah arranges transport) or self-managed (parties handle logistics directly).
